

Copyleaks AI Content Detector

AI Text Generators Are Evolving Quickly, But We're Innovating Faster

With a "fight fire with fire" approach, we harness the power of AI technology to detect the presence of AI. Our AI Content Detector is the only enterprise solution created to detect if content was written by a human or generated by AI, including ChatGPT.

Plus, utilizing AI offers another advantage: as AI content generators become more sophisticated, so do our technology and the ability to detect AI-generated text.

Full Spectrum, Enterprise-level Detection

Unparalleled Speed and Efficiency

With 99.12% accuracy, you'll get the most detailed and accurate findings within a matter of seconds.

Complete Coverage

Detect AI content across all models including ChatGPT, GPT3, Japser, and GPT4 once it is released.

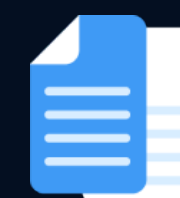

The Only AI Detector Supporting Multiple Languages

Detect AI-generated text in English, Spanish, German, French, and Portuguese, with additional languages in the works.

Seamless API and LMS Integration

Harness the power of AI Content Detector from your native platform with fully customizable API integration, or easily integrate it into your LMS.

The Only AI Detector with In-Depth, Detailed Analysis

With the detection report, get a nuanced view of which text elements are AI-generated and which are written by a human.
